

Patch Clamp Fragen:

1. Which ions contribute to the membrane potential?
2. What is the membrane potential of a non-activated neuron?
3. What is a reversal potential?
4. What do you record if you voltage clamp a cell?
5. How are the 2 main groups of ion channels in the cell membrane activated?
6. What ion initiates the vesicular transmitter release at the axon terminal of a nerve cell?
7. Give 2 possible mechanisms of feedback from horizontal cells to cones?
8. When do amacrine cells contact bipolar cells during development? Before or after eye opening?
